DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1, 3-6, 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yui et al. (5999674).

Yui et al. teaches
an optical waveguide module comprising: an optical waveguide circuit chip having an optical waveguide forming area formed on a substrate; and a package for supporting and storing the optical waveguide circuit chip in at least a peripheral portion of an edge portion;

although Yui et al. does not expressly state an "elastic member for impact relaxation...", it would have been obvious to do so because it is notoriously well known (NWK) to use elastic members for impact relaxation for parts such as numbers 37

and/or 400 of Yui et al.; thus, it would have been obvious for Yui et al. to state. "...wherein an elastic member (See, e.g., numbers 37 and/or 400 in the figures) for impact relaxation of said optical waveguide circuit chip is arranged in at least one portion of the vicinity of the edge portion of said optical waveguide circuit chip." (figs. 2, 5, 7, 9-10).

Thus claim 1 is rejected.

The aforementioned reasoning/references clearly teach each and every element of claims 3-5. Thus claims 3-5 are rejected.

Yui et al. ,at, e.g., fig. 5 (parts 220, 210), teaches a fitting concave portion for fitting the elastic member thereinto is arranged in the package. Thus claim 6 is rejected.

Claim 8 would have been obvious because it is NWK to use elastic member is formed by fluoro-elastomer in such applications. Thus claim 8 is rejected.

Allowable Subject Matter

Claims 2, 7, 9-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
